

are arranged alphabetically, the papers of each author following the sketch in chronological order. The amount of data that the authors have gathered together is enormous, and historians and biographers in general will find this work a veritable mine of information. Ornithologists are seldom narrow, and we find that most of the authors here enumerated were noted in other fields as well. William Bullock whose name is ever associated with the early collections of Mexican birds, is listed as a 'naturalist, collector, traveller, antiquary, auctioneer and showman' while he describes himself on the cover of his 'Museum Companion' as 'Silver-Smith, Jeweller, Toyman and Statue Figure Manufacturer.'!

In addition to the account of Bullock, American ornithologists will find facts of interest in the sketch of Capt. Thomas Brown, publisher of the 'Illustrations of American Ornithology,' and 'Game Birds of North America,' two of the rarest of American ornithological works, while the biographers of Thomas Bewick and Daines Barrington will attract many. We shall look with interest for the succeeding parts of this important work,—a work that should be in all reference libraries.—W. S.

Todd on *Dysithamnus mentalis*.¹—In this paper Mr. Todd has presented a painstaking monograph of a difficult genus of Formicariidæ including detailed descriptions, full synonymy, maps showing the distribution of the species, lists of specimens, and extracts from literature relating to habits, etc. In all respects this is a model piece of work and one which could well be followed by other writers. Five species of the genus are recognized: *D. mentalis* (divided into five races), *semicinereus*, *extremus*, *affinis* (three races) and *andrei*. The new forms are *D. m. aquatorialis* (p. 539), Zaruma, Ecuador, *D. m. lateralis* (p. 540), Guarico, Venezuela; and *D. extremus* (p. 549), Cauca, Colombia.—W. S.

Cherrie on New Neotropical Birds.²—Mr. Cherrie describes ten new South American birds from the collections of the American Museum of Natural History. Two of these were secured by S. M. Klages in Venezuela: *Hemithraupes flavicollis auricularis* (p. 389), Suapure; and *Argicus macrodactylus caurensis* (p. 389), La Union. One was obtained in the Orinoco Delta by Dr. Rusby: *Piaya rutila orinocensis* (p. 393); while the rest were all collected by Mr. Cherrie himself on the Collins-Day Expedition, viz.: *Xiphorhynchus guttata rimarum* (p. 391), Rio Espirito Santo, Bolivia, *Taraba major virgultorum* (p. 391), *Capito auratus insperatus* (p. 391), *Piaya rutila chaparensis* (p. 392), and *Hypocnemis collinsi* (p. 395), all from Todos Santos, Bolivia; *Drymophila phantatis* (p. 396), Cocha-
